Abstract: DE 10004523 A

NOVELTY - The trailer coupling has a coupling arm (5) with a headpiece (6) projecting upwards at its end, to which a trailer can be attached. The coupling arm can be moved by a driver-operated motor between a non-use position in which it is concealed by a vehicle component such as the bumper (1), and an exposed use position.

USE - For a car.

ADVANTAGE - Detracts less from appearance of car.

DESCRIPTION OF DRAWING(S) - The drawing shows the fitted coupling in a perspective view.

Bumper 1

Coupling arm 5
